

This tool allows you to copy values from a raster into another one. The values of the pixels covered by the masks selected will be copied into the second raster.

Although *Fill from another raster* has been designed as a complementary tool for the DEM compiler, it may be used with any single band raster.

Field - *Raster to be modified (Input)*

Choose the Raster (DEM) file corresponding to the DEM you want to copy the values to.

Field - *Select the raster to copy values from*

Choose the raster you want to copy the values from.

Field - *Masks*

Select the vector layer containing the masks of the areas you want to copy.

Specify the *Output file path*.

If there is not a path specified here, the file will be created in the temporary folder. The full path will be shown in the *Log* tab and the result will be loaded to the map canvas.

Warnings:

I) Please avoid using these characters in the file name, as they might cause processing errors: () / - % \$ @ #

II) If this tool is used repetitively with no path specified, previous results will be overwritten. To avoid this, specify a different path (or file name) each time
